Skills

- Python
- Django
- Data Structures & Algorithms
- JavaScript
- SQL
- Back-End Development
- GIT- GITHUB & BitBucket

Certifications

- Infosys Certified Software Programmer
- Hacker Rank Problem Solving
- Python-Django

Hobbies

- Competitive Programming
- Playing Chess
- Playing Volleyball
- Watching Movies

Experience

[Chegg](#) | [Computer Science Subject Expert](#) | March 2021

- Position - Freelancing
- Solving Computer Science Questions

Projects

[WARDAAN](#) | without any rush doctors are available next, It is a web-app based on medical field, aimed to reduce the gap and difficulties faced by the people looking for doctors and hospitals. Here we map each doctor with their speciality so it is easy to search them and people can easily confirm their booking with the choice of their doctor and can make payments as well.

[Social Issue Tracker](#) | It is a web application in which people living in the society can discuss their issues in the society like roads, street lights, parks, sewage etc and can communicate with other related to them. It has several options in which people can see trending topics, most discussed topics, new topics and can create, delete, update the topics. It is developed using Django framework.

[E-Commerce](#) | It is an e-commerce website front and backend connected using Django framework in this user can select items present in the database and can add that to their watchlist and after that they can purchase those items. It has login and logout functionality too.

[Polling Application](#) | It is a web application developed using Django framework , in this user can create a poll and upload it on the website after that multiple users can see that poll and select an option from the poll. In this application user can create, update and delete the poll.

Achievements

- 4 Star CodeChef Coder
- 6 Star HackerRank Coder
- October Lunchtime Rank 137
- September Cook off Rank 288
- January challenge rank 748
- HackerEarth algorithm rank 595
- HackWithInfy 2020 AIR < 800
